

Multi-site corporate network clients demand the kind of robust, secure, ubiquitous broadband connectivity that frequently only satellite can provide. However, not all satellite broadband platforms are created equal. With GlobalConnexSM Network Broadband, you gain the ability to manage your customers' networks across multiple satellites and regions, using just one hub — providing you with an unparalleled ability to offer enterprise-grade, faster-than-DSL connectivity, anywhere in the world, with extremely favorable economics.

GlobalConnexSM Network Broadband

Benefits at a Glance

- Last-mile, enterprise-grade broadband connectivity
- Out-of-the-box support for VoIP, VPN and a wide range of other IP applications
- Provide a pan-regional network solution from a single platform
- C-Band or Ku-Band simultaneous operation
- Deliver real-time multimedia services
- Ability to provide CIRs in both upstream and downstream channels
- High bandwidth efficiency

ONE CONVENIENT SOLUTION FOR ALL ENTERPRISE IP-BASED APPLICATIONS

Commercial-Grade Broadband Access

GlobalConnex (GXS[®]) Network Broadband is specifically designed for multi-location businesses demanding true enterprise-grade connectivity. It's faster than DSL, fully customizable and able to meet all your customers' demands for converged voice, data and video applications on one platform — anywhere in the world.

Flexibility

Build multiple, scalable networks leveraging a common hub platform and interfacing with multiple satellites simultaneously — using both C- and Ku-band frequencies. Once deployed, you can fully manage your GXS Network Broadband infrastructure as a "Virtual Network Operator," or hand off network management to Intelsat under the "Intelsat Managed" option.

Cost-efficiencies

With GXS Network Broadband, Intelsat offers pre-negotiated quantity discounts on service equipment, decreasing the cost of entry for providing broadband services to your customers. A tiered pricing structure allows you to pay as you grow, allowing you to plan and grow your business efficiently.

Guaranteed Quality of Service/CIRs

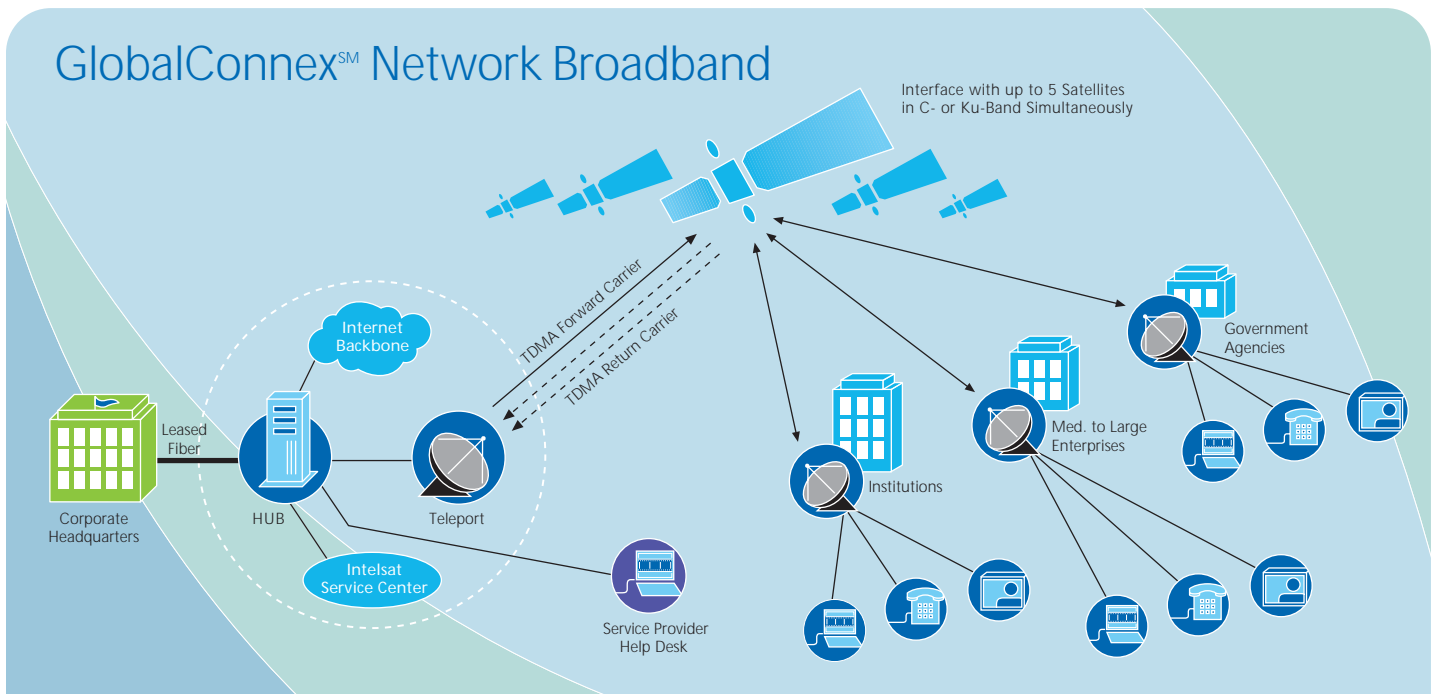

By using industry-leading, TDMA-based VSAT technology, GXS Network Broadband offers an array of QoS features across a wide range of applications, from standard Web browsing, to VoIP, IP video, and more. It allows you to assign Committed Information Rates (CIRs) while offering your customers per-site data rates of up to 5.25 Mbps on the outbound and 2.25 Mbps on the inbound. Plus, GXS Network Broadband lets you aggregate to much higher throughputs across your network.

Enhanced Customer Satisfaction and Always-On Support

GXS Network Broadband combines high data rates with strong QoS capabilities, teamed with Intelsat's reliable 24/7 level two and three support (with escalations to vendors as needed). Plus, GXS Network Broadband offers higher throughputs than competing platforms, improving customer satisfaction.

Backed by Intelsat

Leverage the power of 40 years of accrued technical experience and expertise to deliver real business advantage.

One source, infinite possibilities

Let Intelsat help you extend your reach, add new customers and improve your bottom line. To find out how GlobalConnexSM Network Broadband can help, please contact your local regional representative at:
